

Finding and using information in your academic work

By the end of the session you will be able to ...

- **Search** for books on report writing, presenting and business strategy.
- **Identify** and **access** good quality information resources to support your research.
- **Formulate** an effective search strategy.
- **Avoid** plagiarising in your academic work.
- **Recognise** why and when to cite and reference.
- **Create** and manage BibTeX files.

Part I: Finding information for your project

Researching your **project**

- You can borrow books from **any** of the **libraries** on campus
- Look out for **eBooks**, they are available online 24/7

<https://librarysearch.cf.ac.uk>

Researching your **product**

“What has already been done and what do we need to know to build our product”?

Researching your product

Good quality information

- Articles from peer-reviewed journals
- Textbooks
- Webpages from reliable sources (check for bias)

Wikipedia should be used for background research only.

Researching your product

Journal articles are where academics, such as your lecturers, publish their research.

Decision Support

Selfish routing in public services

ABSTRACT

It is well observed that individual behaviour can have an effect on the efficiency of queueing systems. The impact of this behaviour on the economic efficiency of public services is considered in this paper where we present results concerning the congestion related implications of decisions made by individuals when choosing between facilities. The work presented has important managerial implications at a public policy level when considering the effect of allowing individuals to choose between providers. We show that in general the introduction of choice in an already inefficient system will not have a negative effect. Introducing choice in a system that copes with demand will have a negative effect.

1. Introduction

What damage do the selfish choices of some afflict onto the welfare of all? The work presented in this paper answers this question in the context of public service systems.

There is a substantial quantity of literature on the subject of equilibrium behaviour of a queueing system where congestion is a factor influencing behaviour [1,5,12,23,31,35,51]. This can be traced back to a series of short communications between Leeman [28,29] and Saaty [44]. This paper builds on this literature by considering the problem of public service systems. For most public services, congestion is a negative aspect of service quality. Examples of this are healthcare systems (waiting lists), transport systems (traffic jams) and/or schools (overcrowding of class rooms).

The degree of central control that should be exercised is a very important question to be considered by governments and local

petition). In this system if we were to start routing individuals so as to optimise overall quality of service, we would (by definition) notice an improvement over a situation where individuals had choice. This impact of choice is the one considered here. The approach proposed is based on a measure called the price of anarchy [2,7,8,10,14,18–20,34,41–43,47,52]. First introduced in [25] (a conference paper that has been reprinted in [26]), the price of anarchy is the ratio of the costs of the worst possible Nash equilibrium and the social optimum, and can therefore be interpreted as a measure of the efficiency of a system.

The main contributions of this paper are as follows:

- A novel connection is made: placing choice between public services within the formulation of routing games.
- Theoretical results are obtained as to the effect of demand and worth of service.

To be shown that in a public service system with an adequate

Planning your search

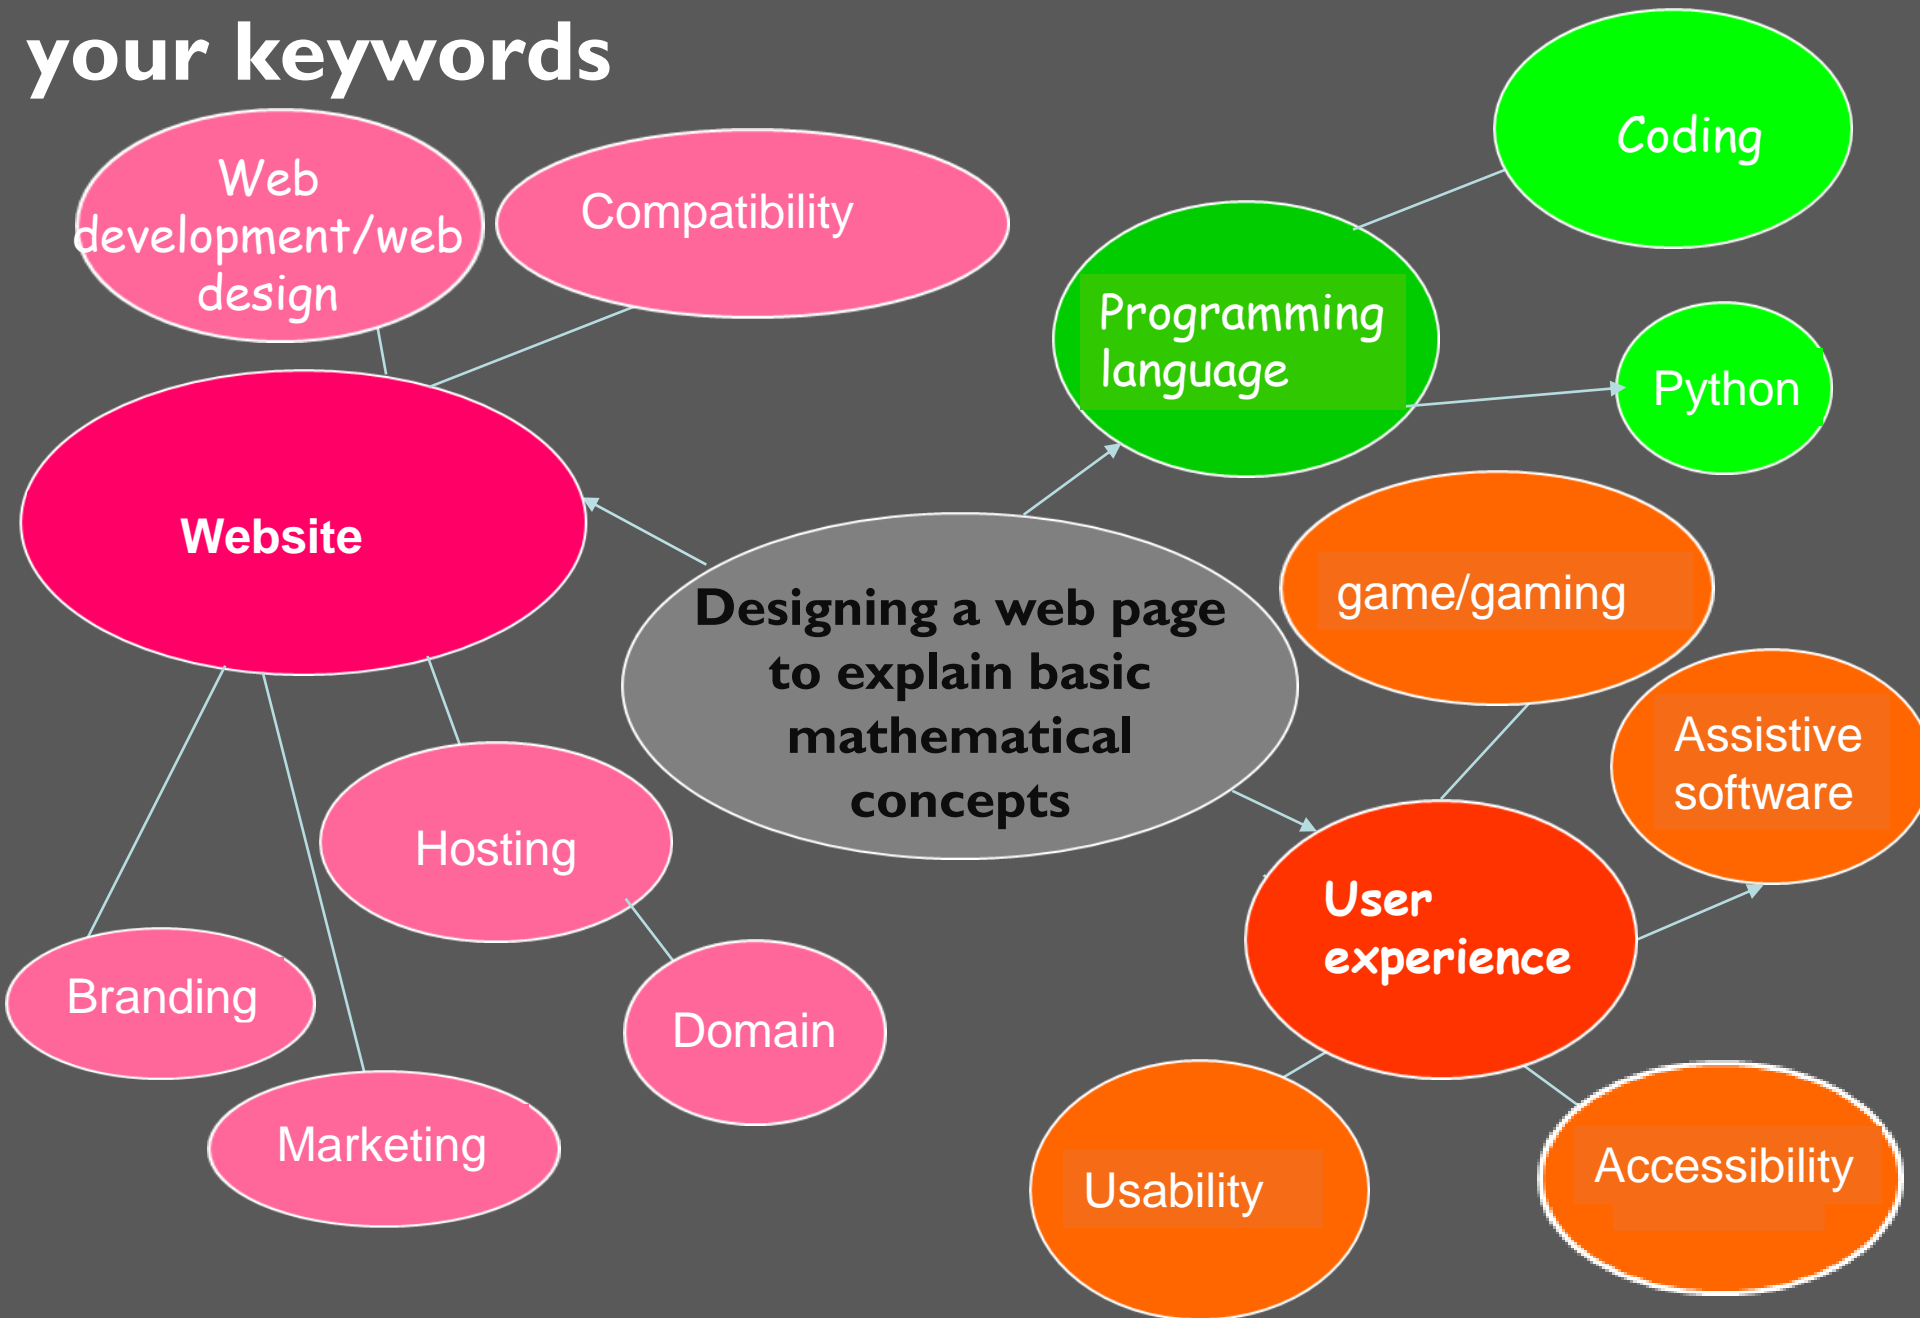

Don't search using whole sentences.

Use **keywords** and think of **alternative terms**

Product idea: "Using programming language to design a website to explain basic mathematical concepts to students age 11-14".

Programming language	Website	User experience
Programming code / coding	web development web design	accessibility usability
Python Javascript	maths math mathematics	learning game/gaming
	hosting / domain branding marketing compatibility	assistive technologies

You can also use a mindmap to organise your keywords

Search techniques

- You can use **quotation marks** to search for a phrase e.g. “web design”
- Using an **asterisk** after the stem of a word allows you to search for several words at once if relevant. e.g. * **comput*** = **compute, computer, computation**

Combine your keywords using **AND**, **OR**, and **NOT** (Boolean logic). For example:

AND

- coding **AND** “web design”

OR

- “web design” **OR** “web development”

NOT

- “south Wales” **NOT** “new South Wales”

Over to you...

Exercise 1

Planning keywords.

Page 1 of your handout.

Marketing and company data

Databases:

- EBSCO Business Source Premier
- Mintel
- Keynote
- Passport

Access via the intranet: Libraries > Information resources by subject > Business, economics & transport

Part 2: Using information and avoiding plagiarism

How ppl flex on instagram and what its really like in real life

O'Neil, L. 2015. People who steal jokes on Twitter – they're coming for you. Available at: <http://www.dazeddigital.com/artsandculture/article/25645/1/people-who-steal-jokes-on-twitter-they-re-coming-for-you> [Accessed 14 November 2016].

Plagiarism

Over to you...

Exercise 2

What is plagiarism?

Page 2 of your handout.

Is it plagiarism if you...?

- Copy and paste a paragraph of text from a web site without enclosing it in quotation marks and referencing the source? **YES**
- Use the ideas of another author without providing a reference even if you write them in your own words? **YES**
- Claim work produced by another student as your own? **YES**
- Copy a diagram or data table from a web site, providing a reference for the source underneath? **NO**
- Submit all or part of one essay for two separate assignments? **YES**
- Copy words from a book into your own work, but place quotation marks around them and provide a citation & reference? **NO**
- Include a fact or saying in your assignment which is generally known without referencing the original source? **NO**
- Change a few words from the original source and provide a citation & reference? **YES**

Citing and referencing

- **Citing** means referring within your text to sources which you have used in the course of your research.
- A **reference** is a description of a book, paper, article, etc., which is quoted directly or is mentioned in support of a your argument

Citing and referencing: Example

1. Introduction

What damage do the selfish choices of some afflict onto the welfare of all? The work presented in this paper answers this question in the context of public service systems.

There is a substantial quantity of literature on the subject of equilibrium behaviour of a queueing system where congestion is a factor influencing behaviour [1,5,12,23,31,35,51]. This can be traced back to a series of short communications between Lee-man [28,29] and Saaty [44]. This paper builds on this literature by considering the problem of public service systems. For most public services, congestion is a negative aspect of service quality. Examples of this are healthcare systems (waiting lists), transports systems (traffic jams) and/or schools (overcrowding of class rooms).

The degree of central control that should be exercised is a very important question to be considered by governments and local

petition). In this system if we were to start routing individuals so as to optimise *overall* quality of service, we would (by definition) notice an improvement over a situation where individuals had choice. This impact of choice is the one considered here. The approach proposed is based on a measure called *the price of anarchy* [2,7,8,10,14,18–20,34,41–43,47,52]. First introduced in [25] (a conference paper that has been reprinted in [26]), the price of anarchy is the ratio of the costs of the worst possible Nash equilibrium and the cost of the socially optimal solution. It can be interpreted as a measure of the inefficiency of a system.

The main contribution

- A novel connection is established between the price of anarchy and the welfare of individuals within the form of public service systems.
- Theoretical results are presented showing that the price of anarchy is a measure of the welfare of individuals within the form of public service systems.

- [5] C. Bell, S. Stidham, Individual versus social optimization in the allocation of customers to alternative servers, *Management Science* 29 (1983) 831–839.
- [6] O. Boudali, A. Economou, Optimal and equilibrium balking strategies in the single server Markovian queue with catastrophes, *European Journal of Operational Research* 218.3 (2012) 708–715.
- [7] C. Chau, The price of anarchy for non-atomic congestion games with symmetric cost maps and elastic demands, *Operations Research Letters* 31 (2003) 327–334.
- [8] R. Cole, Y. Dodis, T. Roughgarden, How much can taxes help selfish routing?, *Journal of Computer and System Sciences* 72 (2006) 444–467.

Why should you cite and reference?

- To acknowledge another author's words and ideas - **avoid plagiarism!**
- To support your argument / claims
- To enable anybody reading your work to locate your sources easily
- To demonstrate the range of sources you have consulted in your research

When should you cite and reference?

Citing and referencing in LaTeX: Using BibTeX

BibTeX is a tool that you can use to help you create your bibliography in LaTeX.

Advantages:

- Once stored in a BibTeX file, a reference can be re-used in future documents
- Automatic export from databases

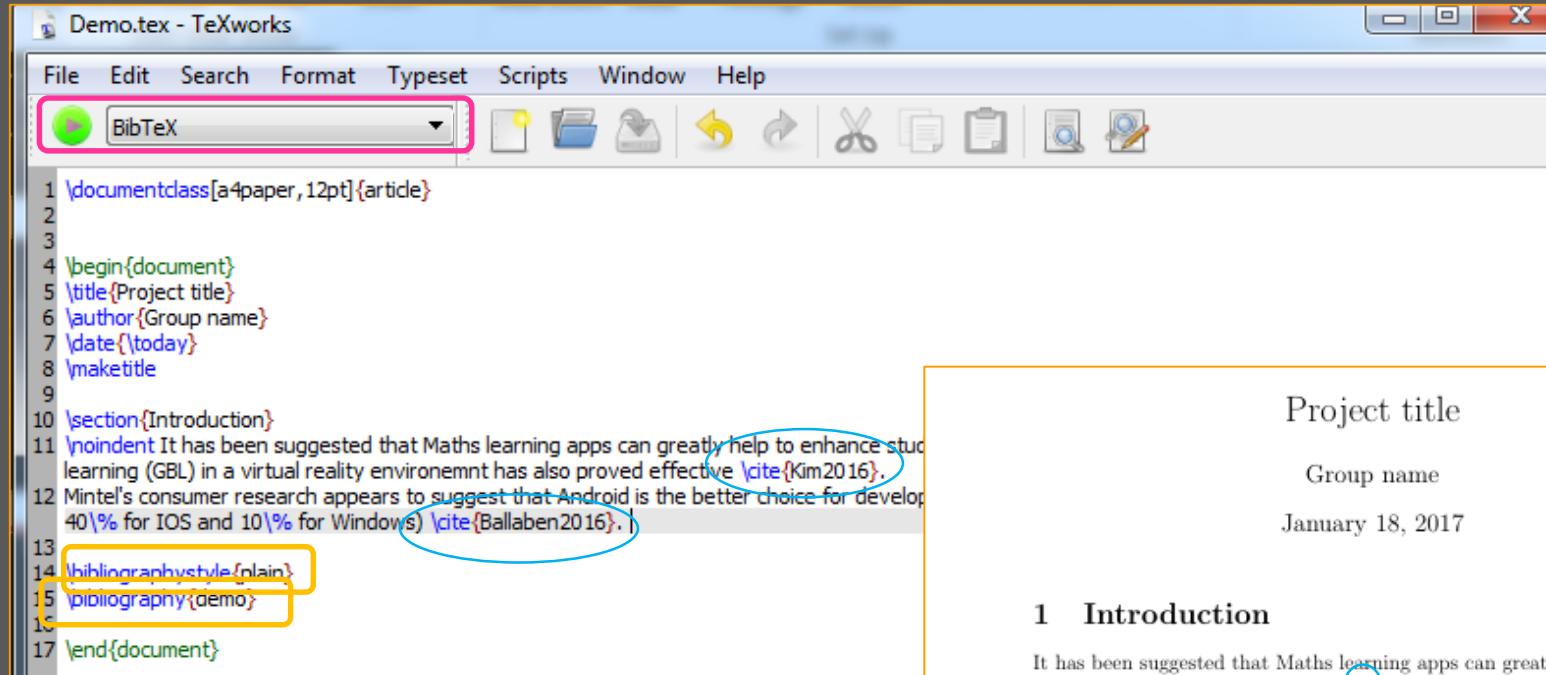

Creating your BibTeX files

You can export your references from databases and automatically create your BibTeX files.

This automatic process may cause some issues and require you to tidy up the BibTeX file so that your references generate correctly in LaTeX.

Online handout provides support: <http://bit.ly/2k2FvS8>

Citing and referencing in LaTeX: Using BibTeX

Other numbered styles in LaTeX:

- `{unsrt}` – same as **plain** except the references in the bibliography appear in the order that the citations appear in the document
- `{abbrv}`
- `{alpha}`

1 Introduction

It has been suggested that Maths learning apps can greatly help to enhance students' interest in learning Maths [2] and game-based learning (GBL) in a virtual reality environemnt has also proved effective [3]. Mintel's consumer research appears to suggest that Android is the better choice for developers given it's wider availability (64% of mobile users compared to 40% for IOS and 10% for Windows) [1].

Managing your BibTeX files: Using JabRef

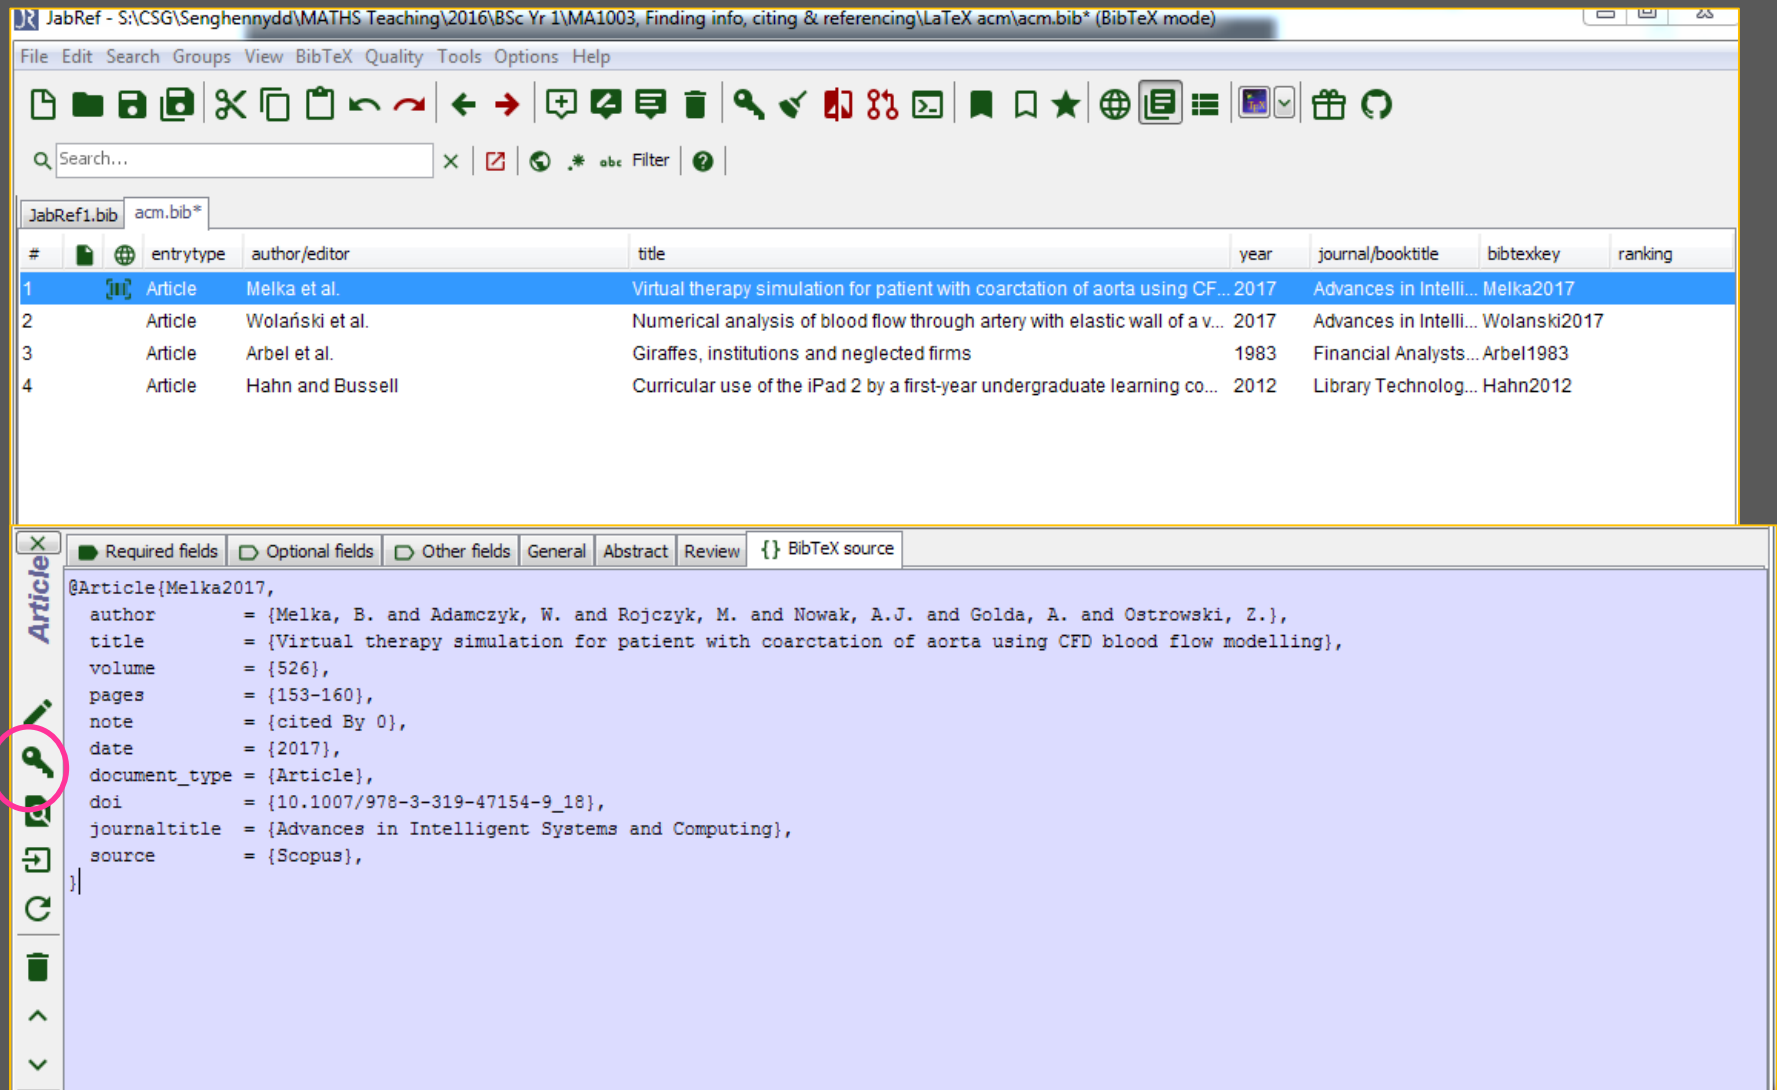

JabRef is an open source bibliography reference manager that organises your BibTeX files so they can be easily created and manipulated.

Features:

- Advanced BibTeX editor
- Search functions
- Various import and export functions

<https://www.fosshub.com/JabRef.html>

Managing your BibTeX files: Using JabRef

The screenshot displays the JabRef application window. The main window shows a list of bibliographic entries in a table format. The table has columns for entry number, entry type, author/editor, title, year, journal/booktitle, bibtexkey, and ranking. The first entry is selected, and its details are shown in a separate pane at the bottom.

#	entrytype	author/editor	title	year	journal/booktitle	bibtexkey	ranking
1	Article	Melka et al.	Virtual therapy simulation for patient with coarctation of aorta using CF...	2017	Advances in Intelli...	Melka2017	
2	Article	Wolański et al.	Numerical analysis of blood flow through artery with elastic wall of a v...	2017	Advances in Intelli...	Wolanski2017	
3	Article	Arbel et al.	Giraffes, institutions and neglected firms	1983	Financial Analysts...	Arbel1983	
4	Article	Hahn and Bussell	Curricular use of the iPad 2 by a first-year undergraduate learning co...	2012	Library Technolog...	Hahn2012	

The bottom pane shows the details of the selected entry (Melka2017) in BibTeX source format:

```
@Article{Melka2017,  
  author      = {Melka, B. and Adamczyk, W. and Rojczyk, M. and Nowak, A.J. and Golda, A. and Ostrowski, Z.},  
  title       = {Virtual therapy simulation for patient with coarctation of aorta using CFD blood flow modelling},  
  volume      = {526},  
  pages       = {153-160},  
  note        = {cited By 0},  
  date        = {2017},  
  document_type = {Article},  
  doi         = {10.1007/978-3-319-47154-9_18},  
  journaltitle = {Advances in Intelligent Systems and Computing},  
  source       = {Scopus},  
}
```

- Will also be on Learning Central

BibTeX and JabRef support.

1. Automatically creating BibTeX files

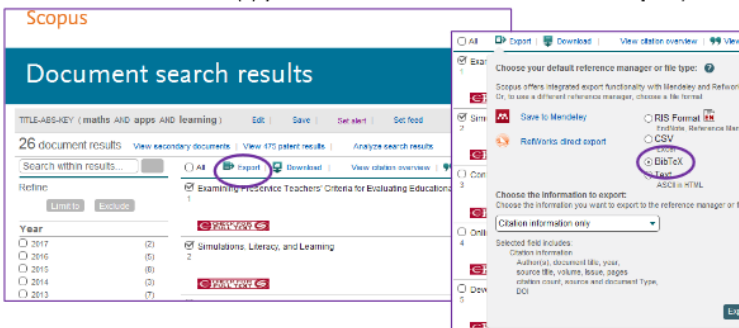

As well as creating BibTeX records manually, it is also possible to automatically generate records by exporting references from databases and search tools such as Scopus and Google Scholar. Major databases often allow bulk export of selected records in one operation.

The process is similar for most databases:

- Select your item(s) for export e.g. via a tick box
- Select the export/download option and choose BibTeX as the output format
- Save the download file (include .bib after the filename if the save option doesn't give this option).

1.1. Exporting from Scopus

Click to select the result(s) you want to create .bib files for. Click **Export**, select

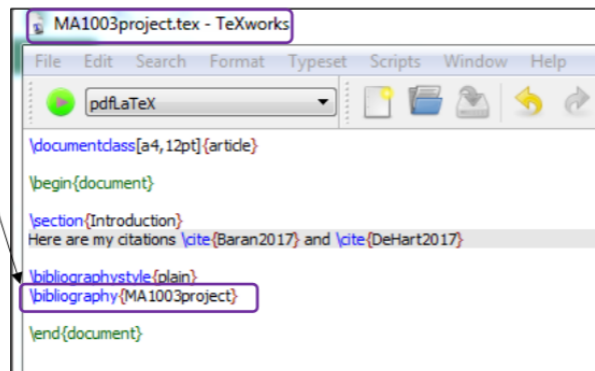

1.2. Exporting from Google Scholar

To export a .bib file in Google Scholar, click **Cite** under the relevant result. The information will be displayed in the browser; copy and paste it into your .bib file or in JabRef (on page X) and save.

2.4 Using JabRef with LaTeX

In your .tex document indicate where you would like your reference list to appear by using the `\bibliography` command followed by the file name of your JabRef database, e.g. `\bibliography{MA1003project}`

Run LaTeX to make sure the bibliography is laid out correctly and the citations are correct (run **pdfLaTeX** > **BibTeX**, **pdfLaTeX** > **pdfLaTeX**).

1 Introduction

Here are my citations [1] and [2].

If you have question marks, run the process again [?].
