Programming and Mathematics

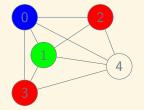

There are various areas in which computers are of major importance to Mathematicians:

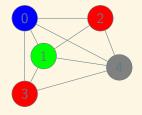

- Computer assisted proofs;
- ► Implementation of mathematics;
- ► Computer generated proofs;
- Everyday mathematics.

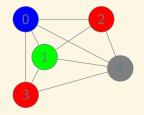

→ '4 colour theorem': Any map can be coloured using 4 colours.

- ▶ '4 colour theorem': Any map can be coloured using 4 colours.
- ▶ Proved in 1976 by Kenneth Appel and Wolfgang Haken: Used computers to check 1936 particular cases.

How to pack 3 dimensional spheres?

- ▶ In 1611 Kepler conjectured the best possible way.
- ▶ Proof in 1998 by Hales which involved a computer to minimize a function of 150 variables (100,000 times).
- ► Also involved a 100 page paper for the 'non computer assisted aspects'.

How to pack 3 dimensional spheres?

- ▶ In 1611 Kepler conjectured the best possible way.
- ▶ Proof in 1998 by Hales which involved a computer to minimize a function of 150 variables (100,000 times).
- ► Also involved a 100 page paper for the 'non computer assisted aspects'.
- ► Referees are 99% sure.

Implementation of mathematics

Here at Cardiff Dr Leanne Smith studied the best way to locate ambulances in Wales. This took in to account:

- ► Queues;
- Survival probabilities of patients;
- ► Time of the day...

Once the mathematics was done a computer program was built to be able to demonstrate to the Welsh Ambulance Trust.

Timothy Gowers

Timothy Gowers

Theorem: Let X and Y be sets, let $f: X \to Y$ be an injection and let A and B be subsetsof X. Then $f(A) \cap f(B) \subset f(A \cap B)$.

Timothy Gowers

Theorem: Let X and Y be sets, let $f: X \to Y$ be an injection and let A and B be subsetsof X. Then $f(A) \cap f(B) \subset f(A \cap B)$.

Proof: Take $x \in f(A) \cap f(B)$. So there is some $y \in A$ and $z \in B$ such that f(y) = f(z) = x. As f is injective, y and z are equal. So $y \in A \cap B$. So $x = f(y) \in f(A \cap B)$.

Timothy Gowers

Theorem: Let X and Y be sets, let $f: X \to Y$ be an injection and let A and B be subsetsof X. Then $f(A) \cap f(B) \subset f(A \cap B)$.

Proof: Take $x \in f(A) \cap f(B)$. So there is some $y \in A$ and $z \in B$ such that f(y) = f(z) = x. As f is injective, y and z are equal. So $y \in A \cap B$. So $x = f(y) \in f(A \cap B)$.

The above is an example of a computer generated proof. You do not need to know any of this!

Everyday mathematics

Everyday mathematicians might need to calculate an integral for a bigger project. This is some code to calculate an integral:

which returns:

$$\frac{x^4}{4}$$

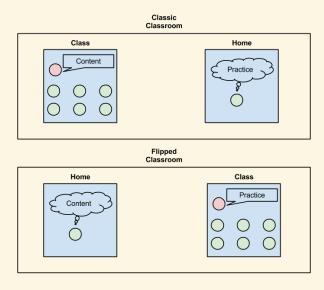

What we will learn

- ▶ Python: general purpose programming (Weeks 1-5).
- ► LATEX: a package for writing mathematics (Week 6).
- ▶ Python: mathematical programming (Weeks 1-5).

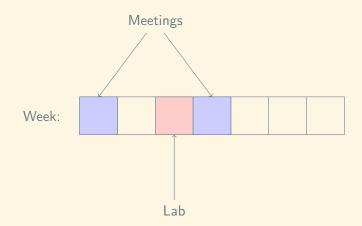

Flipped classrooms

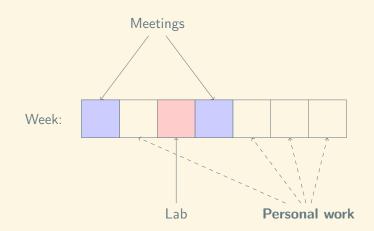

Flipped classrooms

Lab and Class meetings

- ► Every week you have 1 class meeting to look ahead.
- ► Every week you have 1 lab sheet: you should aim to work on your lab sheets before the lab session.
- Every week you have 1 class meeting to look back and address difficulties.

Some Feedback

Vince

"Vince very approachable"

(50%)

"You are intimidating and I would personally rather approach a tutor for help - no offence. Where is your accent from?"

(20%)

The class meeting

"The lecture is useful to go over what we struggle with."

(60%)

"Would be better to discuss the upcoming lab sheets in lectures instead of the one we just did."

(4%)

"Some aspects should be taught first in lectures."

(4%)

Labs

"Some (not all) [tutors] just give us the answers and don't explain it clear enough AND."

(3%)

"Sometimes asking if you're watched videos when you have is a bit demoralising, makes it hard to ask for help."

(3%)

"Would like to know about all assessment from the start, class test was only recently revealed and don't know much about the remaining 45%"

Individual Coursework: Week 11 - 70%
Group Coursework: Spring semester - 30%

Getting help

- ► Gitter (chat) room: vknight.org/cfm.
- ► Message boards: vknight.org/cfm.
- ► email: knightva@cf.ac.uk.
- ► Office hours (M1.30): Thursday 1300 1500.
